Executive Summary – Ferns and Petals Sales Analysis Dashboard (Excel)

The **Ferns and Petals Sales Analysis Dashboard** is an interactive Excel-based business intelligence solution developed to analyze sales performance across products, occasions, time periods, and geographic locations. The dashboard provides a comprehensive and visually intuitive view of key business metrics, enabling stakeholders to make informed, data-driven decisions.

Objective

The primary objective of this project is to:

- Analyze sales data to uncover trends and patterns
- Monitor overall business performance
- Identify top-performing products, categories, and regions
- Understand customer purchasing behavior across occasions
- Support strategic planning through actionable insights

Key Performance Metrics

The dashboard highlights critical KPIs for quick evaluation:

- **Total Orders:** 1000
- **Total Revenue:** 3.52 Million
- **Average Delivery Time:** 5.53 days
- **Average Customer Spending:** 3520.98

These metrics provide a high-level understanding of operational efficiency and revenue performance.

Key Insights

1. Sales Trends (Monthly Analysis)
Sales exhibit strong seasonality, with peaks in **February** and **August**, and lower

performance in **April, July, and September**.
→ Indicates the influence of seasonal demand and gifting occasions.

---

2. Revenue by Category
Categories such as **Colors** and **Soft Toys** generate the highest revenue, while **Mugs** and **Plants** show comparatively lower performance.
→ Helps prioritize high-demand categories and optimize inventory.

---

3. Top Performing Products
Products like **Magnam Set**, **Quia Gift**, and **Dolores Gift** are the leading contributors to revenue.
→ These products can be targeted for promotions and bundling strategies.

---

4. Geographic Performance
Cities such as **Imphal, Dhanbad, and Kavali** demonstrate strong sales performance.
→ Enables region-specific marketing and expansion planning.

---

5. Occasion-Based Insights
Occasions like **Anniversary** and **Raksha Bandhan** generate the highest revenue, while **Diwali** and **Valentine's Day** show relatively lower performance.
→ Suggests opportunities to strengthen campaigns during underperforming occasions.

---

6. Time-Based Sales Patterns
Sales peak during evening hours (**5 PM – 8 PM**) and are lowest in early morning hours.
→ Useful for optimizing ad timing and promotional campaigns.

Dashboard Features

- Interactive filters (Order Date, Delivery Date, Occasion)
- KPI cards for instant performance overview
- Dynamic visualizations (line charts, bar charts)

- City-level and category-level breakdown
- Built using **Excel Pivot Tables, Charts, and Slicers**

Business Impact

This dashboard helps Ferns and Petals:

- Improve decision-making with real-time insights
- Identify high-revenue opportunities
- Optimize marketing strategies based on trends
- Enhance customer targeting and engagement
- Streamline inventory and supply chain planning
